This heat equals the latent heat absorbed as the iceberg melts, so

Combining gives

In isochoric heating step , let the final pressure be and volume . Then

In each small isothermal jet step, the vessel pressure changes by , with

Here is the volume in step , and the vessel pressure. The expelled gas has kinetic energy

Eliminating using gives

Taking , the total kinetic energy is

The total electrical energy obtained under the given conditions is

Substituting into gives

Substituting the numerical data gives
